MediRoute demo data

Medicine inventory and usage test dataset

Prepared 22 October 2026 | Synthetic records | No patient data

INCLUDED IN THIS PDF

6 stock records | 84 daily usage observations | 4 medicine test cases

Quick start

In MediRoute, open Add my data, select this PDF, choose Replace existing data for predictable results, then click Read PDF and analyse. This document contains medicine stock and dated usage tables for the importer.

Test cases covered

- Feasible medicine transfer from a facility with surplus stock
- Shortage where no eligible medicine donor has enough surplus
- Medicine batch nearing expiry
- Healthy stock with no expected alert

SCOPE

Synthetic examples exercise the prototype only. They are not clinical guidance, real demand estimates, or authorization to transfer or issue medicines.

1. Medicine stock input

Use these exact stock headers when preparing a compatible PDF. Expiry is in days.

Facility	Medicine	Stock	Expiry days	Lead days	Incoming
North General	Amoxicillin 500 mg	400	90	5	0
South Clinic	Amoxicillin 500 mg	20	90	5	0
East Clinic	Paracetamol 500 mg	20	90	5	0
West Clinic	Paracetamol 500 mg	50	90	5	0
Central Ward	Sodium Chloride 0.9% 100 mL	150	3	5	0
Hill Hospital	Metformin 500 mg	300	90	5	0

Medicine test cases

M1 - feasible transfer

South Amoxicillin 20; North 400; both use 10/day. Expected: propose about 80 units and preserve donor reserve.

M2 - no eligible donor

East Paracetamol 20; West 50; both use 10/day. Expected: East remains short; West has no surplus.

M3 - expiry risk

Central Sodium Chloride 150; expiry in 3 days; use 10/day. Expected: flag quantity likely unused at expiry.

M4 - healthy stock

Hill Metformin 300; expiry in 90 days; use 10/day. Expected: no shortage or expiry alert.

All lead days are 5 and incoming quantities are 0. Values are synthetic for repeatable testing.

2. Daily usage input - part 1

First 42 of 84 daily observations. Usage is 10 units per day for each pair.

Facility	Medicine	Date	Used
North General	Amoxicillin 500 mg	2026-10-08	10

3. Medicine test case calculations

Import with Replace existing data selected and leave dashboard settings at their defaults.

M1 - feasible transfer

Default settings require 5 delivery days + 2 buffer days + 3 safety days = 10 days of cover. At 10 units/day, South Clinic targets 100 units. It starts with 20, so the shortfall is 80. North General has sufficient stock to share while retaining the planner reserve.

M2 - no eligible donor

East Clinic targets 100 Paracetamol units and starts with 20, leaving a shortfall of 80. West Clinic has 50 units, below the protected cover amount, so no transfer should be proposed; the shortage remains for reorder planning.

M3 - expiry risk

Central Ward has 150 units with 3 days before expiry. At 10 units/day, only about 30 units are projected to be used before expiry, so the remaining quantity should be flagged as expiry risk.

M4 - healthy stock

Hill Hospital has 300 units and a 90-day expiry horizon. Under the default settings, it should show no shortage or expiry alert.

If results differ

Use Replace existing data so other medicine records do not affect the demo calculation.

Synthetic sample only; it does not prove real-world performance. Verify stock, expiry, demand, and facility details before acting on any prototype recommendation.
